# PerfectCue®

Configure PerfectCue
PC-Micro v 2.0

Connect a USB data cable to one of the "C" ports.

Launch the app.

Press Settings (✳), if requested. The Yellow LED blinks as the device exposes its memory to the computer and is recognized as a new, lettered drive – "PERFECTCUE (D:)".

View the keystroke shortcuts associated with each transmitter button. These control presentations on connected computers.

Click a command.

Enter a new keystroke such as [PG DN] or [SPACE], or a keystroke macro such as [Ctrl] [+] into the edit dialog.

To disable a transmitter key such as the blank button, enter a null value.

SAVE

Sound Cue (PortA)

Sounds are not available on this version of the PC-Micro.
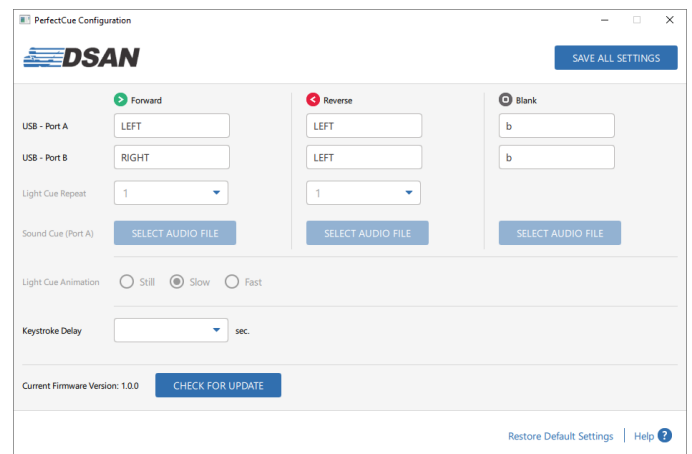

Light Cue Animation

Animations are not available on this version of the PC-Micro.

Keystroke Delay

Slide changes can be delayed for up to 1 second after PC-Micro receives the wireless command. Why would you want this? See below**.

SAVE ALL SETTINGS

Update the Firmware

Download and save a new version of the file "PerfectCue.zip to your computer. It contains the firmware file "PerfectCue.bin" and a pdf file that explains new features or improvements.

Browse for the PerfectCue.bin file. Open. UPLOAD.

Unplug the USB cable(s). Reconnect. Test.

Popular Shortcuts for Presentation Applications

Screen White	[w]	[w]		
Enlarge Image	[Ctrl] [+]	COMMAND [⌘] [>]		
Start/Stop VIdeo	[Alt] [P]	[SPACE]		

**Slide Change Delay

Have you ever been to an airport or a large train station?   Important announcements are often preceded by a chime, a short musical motif, or a simple word like "*Announcement!*" These are designed to get travelers' attention before important information is delivered. Larger PerfectCue models have cue sounds that alert the audience.   PC-Micro has no sounds. A delay can create a brief silence of the presenter's anticipation and helps cue viewers to a slide event.
